WELCOME TO HUME DOORS & TIMBER

HUME'S VALUES

- To innovate and make a difference in your home
- To continue to build valued relationships with staff, suppliers and distributors
- To continue to improve on our environmental sustainability and recycling

Hume Doors & Timber is New Zealand's largest 100% Australian owned timber door manufacturer with over 60 years of proud history. Hume Doors will always stand by its family based values and exceptional customer service.

Whether leading the way in sustainability, innovation or design, Hume Doors & Timber remains committed to developing outstanding products for the New Zealand market.

Hume Doors & Timber complies with Australian Standard AS 2688-2017 for the manufacture and importation of timber doors.

OVERHEAD PROTECTION

With New Zealand's climate extremes entrance doors will weather differently and timber doors are more susceptible to the elements than steel, aluminium or fibreglass doors.

Depending on your location and aspect, the required overhead protection will vary.

The diagram above and chart below will assist in determining the size of overhead protection which will vary depending on home design and adjacent walls.

Dimension 'C' – subject to adjacent walls – minimum width same width as entry frame.

Note: Colour choice for your exterior door will also affect weathering. Dark colours absorb heat, accelerating door deterioration, warping and bowing. For door Guarantee refer page 50 and Care & Maintenance page 5.

Formula | Overhead Protection:

Sheltered Entry	A = 1/2 of B
Dimension C	Subject to adjacent walls. Minimum width should be the same or more than the width of entry frame.

CARE & MAINTENANCE

**5 YEAR
GUARANTEE**

- Your timber door may be affected by changes in temperature, moisture and location. After selecting and purchasing your Hume door, store flat in a dry, well-ventilated area before installation.
- Before fitting the door, all six door surfaces should be sealed initially then after installation painted, stained or clear finished with good quality products. Follow the paint manufacturer's instructions with the correct number of coats on ALL surfaces.
- Light reflective colours are recommended for Entrance Doors to reduce the possibility of bow, twist or warp. Dark colours will void Hume guarantee. Semigloss finishes are recommended. Paint with a light reflectance value (LRV) finish greater than 50 should be used on external doors. See table below.
- Use the same colour on all six door surfaces. Different colours may cause doors to warp.
- Entrance Doors require overhead protection. Refer to Page 4.
- Location and fitting of your door furniture can depend on door construction. Solid doors (doors rated for BAL12.5, BAL19, BAL29 & BAL40) may have door furniture installed at any selected height, either side of the door. Please liaise with Hume Doors NZ.
- Door maintenance is necessary for long term performance and periodic inspections are recommended. At the first signs of deterioration, your door should be properly refinished. Make sure that all surfaces of the door receive proper resealing and painting.
- To clean your door, use a damp cloth. Do not hose or use chemicals or abrasives on your door. Lightly oil hinges and door furniture for optimum performance.
- Contact your nearest Hume Doors stockist or the Hume Doors website for more information.

Light Reflectance Value (LRV) Table

ENVIRONMENTAL COMMITMENT

Hume Doors & Timber is committed to operating its entire business processes in an environmentally sustainable manner at all times. Our goal is to be regarded as an environmentally responsible corporate citizen that practices environmental stewardship and provides our valued customer base with complete confidence that our products have been produced in accordance with applicable independent environmental standards.

- Reusing and recycling by-products, packaging and waste material
- Reducing the level of packaging and consumables used
- Capturing, storing and using rainwater for our water needs
- Maximise transport loads, thus reducing energy requirements

We embrace environmental awareness, protection and enhancement.

Timber is a fully sustainable resource that is non-toxic, reusable and versatile. The continued growth and planting of forests aid in the reduction of carbon dioxide. The future of our products, business, industry and customer satisfaction is directly linked to the sustainable management of the world's forests.

Our manufacturing and distribution processes have been designed to minimise our environmental footprint by, among other things:

- Utilising energy to its maximum efficiency
- Subscribing to renewable energy sources (where possible)
- Utilising recycled product (where possible)
- Organising our transportation routes to minimise energy requirements of our vehicle fleet
- Providing reliable, long lasting products that are backed by a 5 year guarantee
- Ensuring our suppliers of raw material products are accredited by appropriate independent, third party environmental stewardship programs including FSC (Forest Stewardship Council), PEFC (Programme for the Endorsement of Forest Certification Schemes), AFS (Australian Forestry Standard), etc and hold to the principles of and guidelines contained within these programs.

INTERNAL DOORS

CAVITY DOORS

Steel Strengthened — Tough & Sustainable

Where doors are more prone to bowing or twisting, use our double-sided engineer-designed Steel Inserts for extra strength to ensure that your door stays straight.

The Steel Insert options are available within our Deluxe Basic Interior and Accent Deluxe Door Ranges.

**BASIC INTERIOR
DOOR RANGE**
(refer to Page 36)

ACCENT RANGE
(refer to Page 32)

Benefits of Steel Inserts:

- Strengthens the door to reduce warp, twist or bowing.
- Required for Evolution Cavity Units.
- Double sided engineered inserts.

STEEL INSERTS | Specifications & Sizes

• Standard Sizes: 1980 x 410 / 460 / 510 / 560 / 610 / 660 / 710 / 760 / 810 / 860 / 910 x 37mm

• Special Sizes: 37mm thick: Up to 2700mm high by 1210mm wide
40mm thick: Up to 2400mm x 1200mm wide

Door Mass (For Standard Sizes): Approx 35kgs

• Core: Hollowcore, Polycore, HMR MUF

• Skin Options: 4.75mm only

INTERNAL SYSTEMS

EVOLUTION CAVITY UNITS

A door option that fits inside a wall, Evolution Cavity Units slide smoothly into a concealed space.

To utilise the space normally taken up by a hinged door we offer a sliding door option inside a wall called a Cavity Unit. The door simply slides smoothly into a pocket in the wall (90mm Stud Only).

Features & Benefits:

- Available in standard sizes to suit 1980mm and 2200mm high doors and door widths of 910, 860, 810, 760, 710, 660 & 610mm.
- Closing jamps — supplied as standard.
- Heavy duty aluminium smooth running track.
- 8 wheel system — carries doors up to 70kg.
- No floor guides required, T-Guide supplied.
- Aluminium back post for strength and easy installation.
- Timber slats for easy fixing of wall linings.
- Aluminium bottom plate.
- For painting purposes, quick release base plate with wheel assembly allows for easy removal (leaves wheels in track).
- Special size and double cavities are available.
- Please specify if grooved bottom rail is required.
- **Easy Access Cavity Units** allows for the door to protrude 100mm from the pocket and a clear walk through of 810mm for wheel chair clearance.

Simplicity & Easy Fit

A sliding wardrobe door system, enabling you to carry through your chosen internal door theme.

■ Space Saving Solution

Smartrobe sliding doors require very little space to open and convert your walls into a practical storage solution.

■ Stylish & Sturdy

We use our sturdy 35mm thick internal doors. This allows us to offer our full Internal Range of doors for sliding doors that fit perfectly into your home design.

■ Mirrored Doors Available

Choosing a mirrored finish makes your room appear larger while giving the room a lighter feel.

■ Smooth & Quiet

Each Smartrobe door includes two nylon wheels encased in steel assemblies.

HOW TO HANG A DOOR

FIGURE 1:
Measure existing door

- Check measure the height on both sides of the door.
- Then measure the width at the top, middle and the bottom of the door.
- Also measure the door thickness.

FIGURE 2

- Is the door frame square?
- Check by measuring diagonally as illustrated.
- If the frame is out of square, you may require a slightly larger door and trim it to size.
- A trimming allowance of up to 3mm is allowed on all doors.

FIGURE 3

Important:

- Approximately 3mm clearance is required at the top and sides of the door.
- 5mm at the bottom (above the floor covering).

- Tools required – drill, screwdriver, chisel (25mm), hole saws (54mm and 25mm) tape measure, hammer, small wedges (2).
- If replacing an existing door, use this door as a template to locate hinges and face hole/s onto your new door. To measure a door, see Figure 1.
- Should a new frame be required, this may be purchased in either knock down or assembled from your Hume Doors & Timber stockist. If making your own frame, allow clearance for your door of 3mm at top and each side plus 5mm under door allowing for floor coverings, tiles, etc. It is important to ensure that your frame is square and plumb.
- Your new door may require planing to fit the opening. A maximum 3mm may be trimmed from any edge of the door.
- Hinges required: 3 hinges for 1980mm doors (non solid), 4 hinges for solid and 2200–2400mm doors. Locate and install hinges to jamb in desired locations. Measure hinge locations from jamb onto door (remember to allow clearance between top of door and frame). Chisel hinge cut outs into edge of door.
- If you have the original door from the existing opening, measure from the top of the door to the top of each hinge and copy measurements to the new door. Stand door into frame to check hinge locations are correct. Use wedges to adjust door height, locate other hinge leaf into door and screw into place with 2 screws per hinge.
- Your door should now swing freely. If any final adjustment is required, make these, fit remaining screws, and your door is ready to have door furniture installed. Fit door furniture as per manufacturers instructions.
- Doors have a leading edge easement when manufactured. This allows a tighter fit between the door and jamb when in the closed position. Please check before fitting. See Figure 4.
- Door should now be removed, fully painted on all six surfaces as well as behind hinges (refer Care and Maintenance information) and then reinstalled into the opening and the door furniture refitted.

GLASS

GLAZING OPTIONS

Glass options for Entrance and Interior doors are detailed below, together with our exclusive Triple Glaze range (available for Regency and Vaocluse doors).

Glass colouring is as accurate as modern printing processes allow. Please note that colour variations may occur in actual glass designs due to printing techniques.

Glass images shown are not to scale and some glass options require a 12 week lead time for production.

TRIPLE GLAZE

Our Triple Glaze option uses exclusive leadlight glass designs which are vacuum sealed with protected clear toughened glass each side.

K Steel Inserts	
L Glazing	See Page 46

WARRANTY / GUARANTEE

Subject to terms and conditions set forth herein, doors manufactured by Hume Doors & Timber NZ Ltd (here in after referred to as "the Company") are guaranteed by the manufacturer for five years from the date of shipment by the manufacturer.

TERMS & CONDITIONS

NATURAL VARIATIONS

Natural variations in the colour, texture or grain pattern of the wood or MDF are not to be considered defects.

GENERAL CARE & INSTALLATION

Doors must be accorded reasonable treatment by the purchaser and should be stored or hung in dry buildings and not in damp, moist or freshly plastered areas. The utility or structural strength must not be impaired in the fitting of the door, the application of hardware, or cutting and altering of the door for lights, louvres, panels or any special details. **A maximum of 3mm may be trimmed from any edge of the door.** This must be done evenly. Normal "showthrough" of frame components in doors shall not be considered a defect. Entrance/solid doors up to 1980 x 810 require three hinges, larger doors require four hinges or pivot system. **ENTRANCE DOORS & ENTRANCE SYSTEMS SHOULD BE HUNG IN WEATHER PROTECTED AREAS.** Doors and door systems including pivot systems that are installed in a fully exposed situation including opening out doors will not be warranted.

PAINTING OF DOORS

Immediately after fitting and prior to hanging, the entire door including the top and bottom edges must be painted.

Use a good quality paint or coating system and always follow the paint manufacturer's advice. Pay particular attention to internal vs external paint systems and use the one appropriate to where you are hanging the door. This includes doors that are supplied raw or factory primed. If staining, must use exterior grade varnish/sealer to prevent absorption of moisture. Always follow the varnish/sealer manufacturer's advice. **SEMI GLOSS OR SATIN FINISHES ARE RECOMMENDED FOR ALL DOORS TO REDUCE "SHOW-THROUGH".**

Exterior finishes to be applied strictly in accordance with paint manufacturers instructions. Entrance and exterior doors should be finished in light reflective colours to reduce the risk of heat absorption which may cause warping. **DARK COLOURS WILL VOID WARRANTY.** Paint with a light reflectance value (LRV) finish greater than 50 should be used on exterior doors. White has an LRV of approximately 95, black has an LRV of approximately 5.

Please consult your painter before proceeding.

Both faces should have the same colour applied. Regular maintenance should be provided to prevent deterioration. Doors must be inspected upon arrival for visible defects and all claims based there-on must be filed within 24 hours.

WARPING

Warp shall be interpreted as meaning the cupping/bowing or twisting of doors. It refers to distortion within the door itself and not its relationship to the jambs or frame in which it is hung.

DOOR SIZE	DEFINITION OF WARPING
Up to 1980 x 910mm	More than 5mm
Between 1980 x 910 – 2200 x 910	More than 6mm
2200 x 910mm – 2340 x 920mm	More than 6mm

Doors in excess of 2340mm high or 910mm wide are not guaranteed against warp.

The guarantee against warp does not apply to the following:

- Doors with face veneers of different species.
- Doors that are improperly hung or do not swing freely.
- External flush doors which have been painted or stained dark colours, or different colours each face.

Experience has demonstrated that when warp occurs after doors have been delivered to storage or building sites, it is usually due to improper storage or adverse moisture conditions after hanging and not to faulty manufacture. The Company will accept no responsibility for doors when moisture content of the timber falls below 12% or exceeds 18%. The Company will not accept responsibility for conditions wholly beyond its control. However, the Company should be consulted promptly if excessive warping occurs to provide assistance in overcoming the difficulty.

EXCLUSIONS

The Company will not be held responsible for additional charges of hanging, painting or other charges arising from the replacement of doors. Any such defects must be brought to the attention of the manufacturer when discovered and in any event within five years from the date of shipment by the Company.

The Company is not liable to reimburse any purchaser for doors repaired or replaced without the prior written consent of the Company to such repair or replacement. The Company will not assume responsibility for doors which become defective because of failure to follow these conditions or hazards of shipment or storage, after doors leave the control of the Company. The Company will not be liable for any costs, claims, damages or demands arising from the personal injury, loss or damage whatsoever occurring to the customer or its agents, servants as a result of either acts or omissions of the customer. The Company will not be liable for any consequential loss or damage, whether due to its negligence or otherwise. The Company will not be liable to the customer for the Company's failure to comply with its obligations to the customer due to any cause beyond the Company's reasonable control and the Company's obligations affected by such cause are suspended while the cause continues to prevent or hinder the Company's performance.
